

Thank you for your order !

Please, don't forget to rate  the plugin.

We provide support for this plugin, and will be glad to hear from you, and any of your suggestions. We will implement them on the next release.

**Our next release will bring better comptatibility with Firefox and Internet Explorer. Right now, Pinz will run smoothly on Chrome.**

## Introduction

**Pinz** is a simple way to pin/place any kind of post or page anywhere on your website.

One great plus of **Pinz** is that it works on any theme !

- Think for a second that you want to place a contact form 'here', directly on your homepage. But with the specific theme you are using, you just can't. You will have to go into the code... (argh!!)

- Or maybe, you want to put a temporary message on you website. Let's say, at the end of all your post/page. Or maybe at the top you website... well...

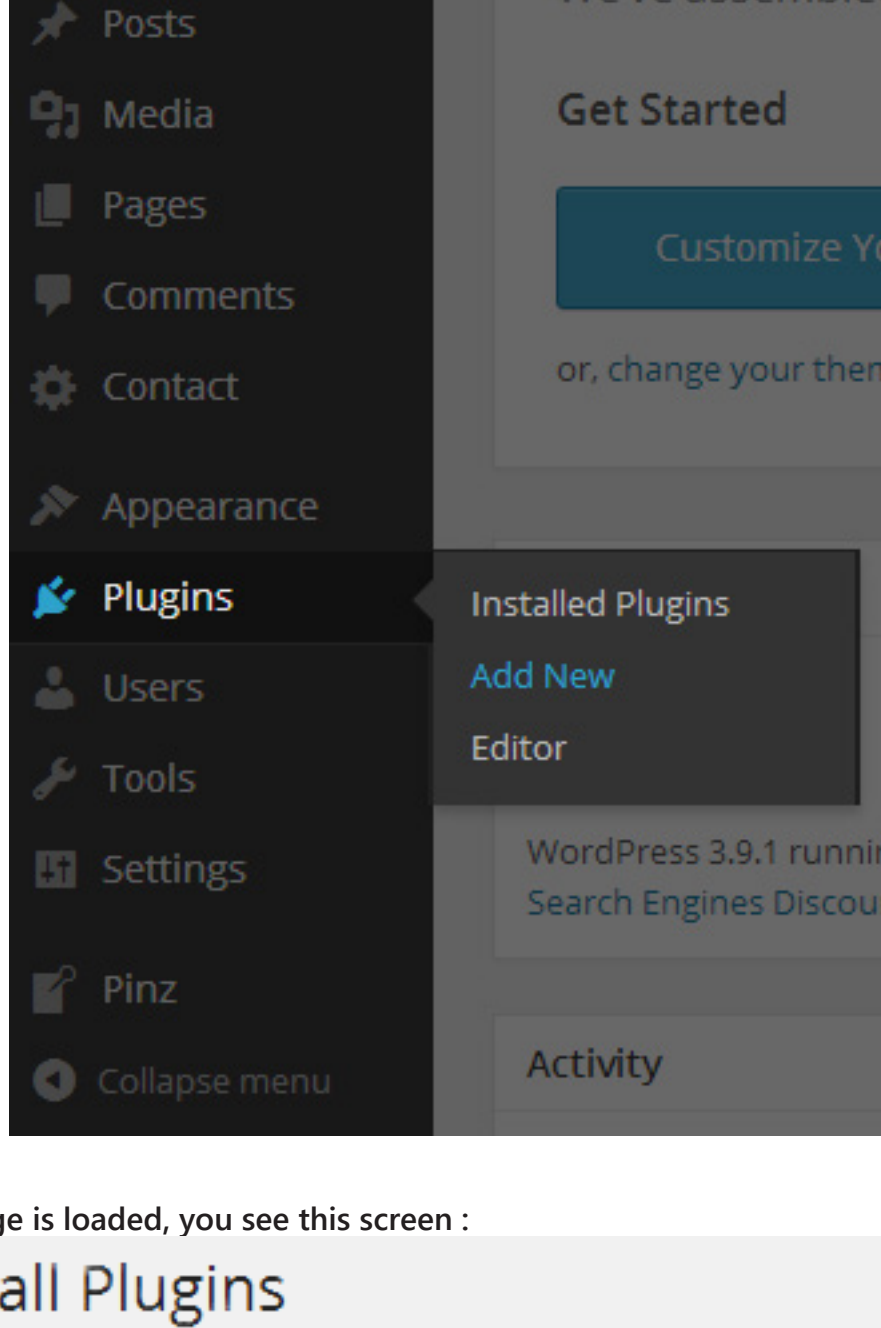

In other words, **Pinz** allows you to bypass all themes limits and keep it simple !

## Installation

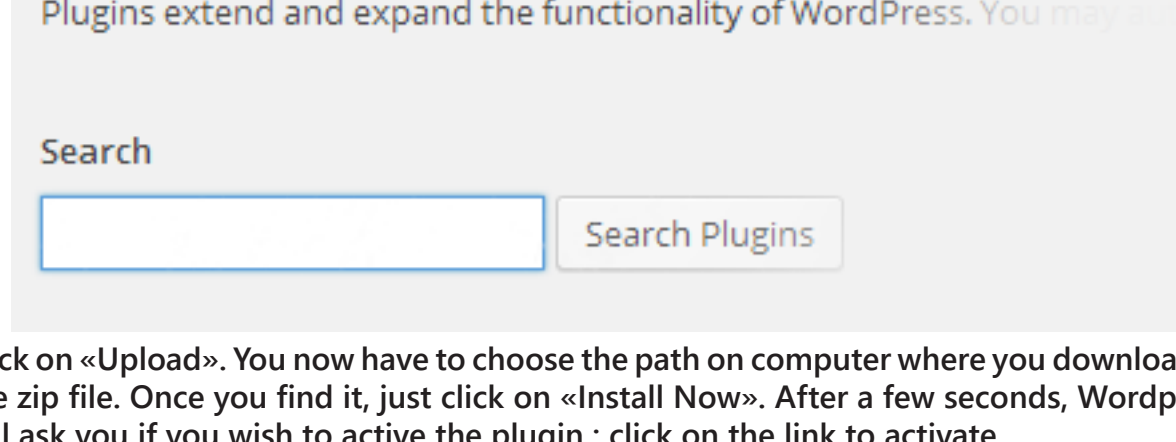

In Wordpress, plugin can be installed in 2 manners. Once you have downloaded the plugin, you can intall it in two ways :

 **Install the plugin by decompressing the content of the zip file, directly on your host by navigating to the root folder of your Wordpress installation :**  
[ROOT\_FOLDER]/ wp-content/plugins Or...

 **RECOMMENDED :** Log into your Wordpress adminstration area. On the left navigation bar, locate «Plugin». Then click on «Add New» :

Once the page is loaded, you see this screen :

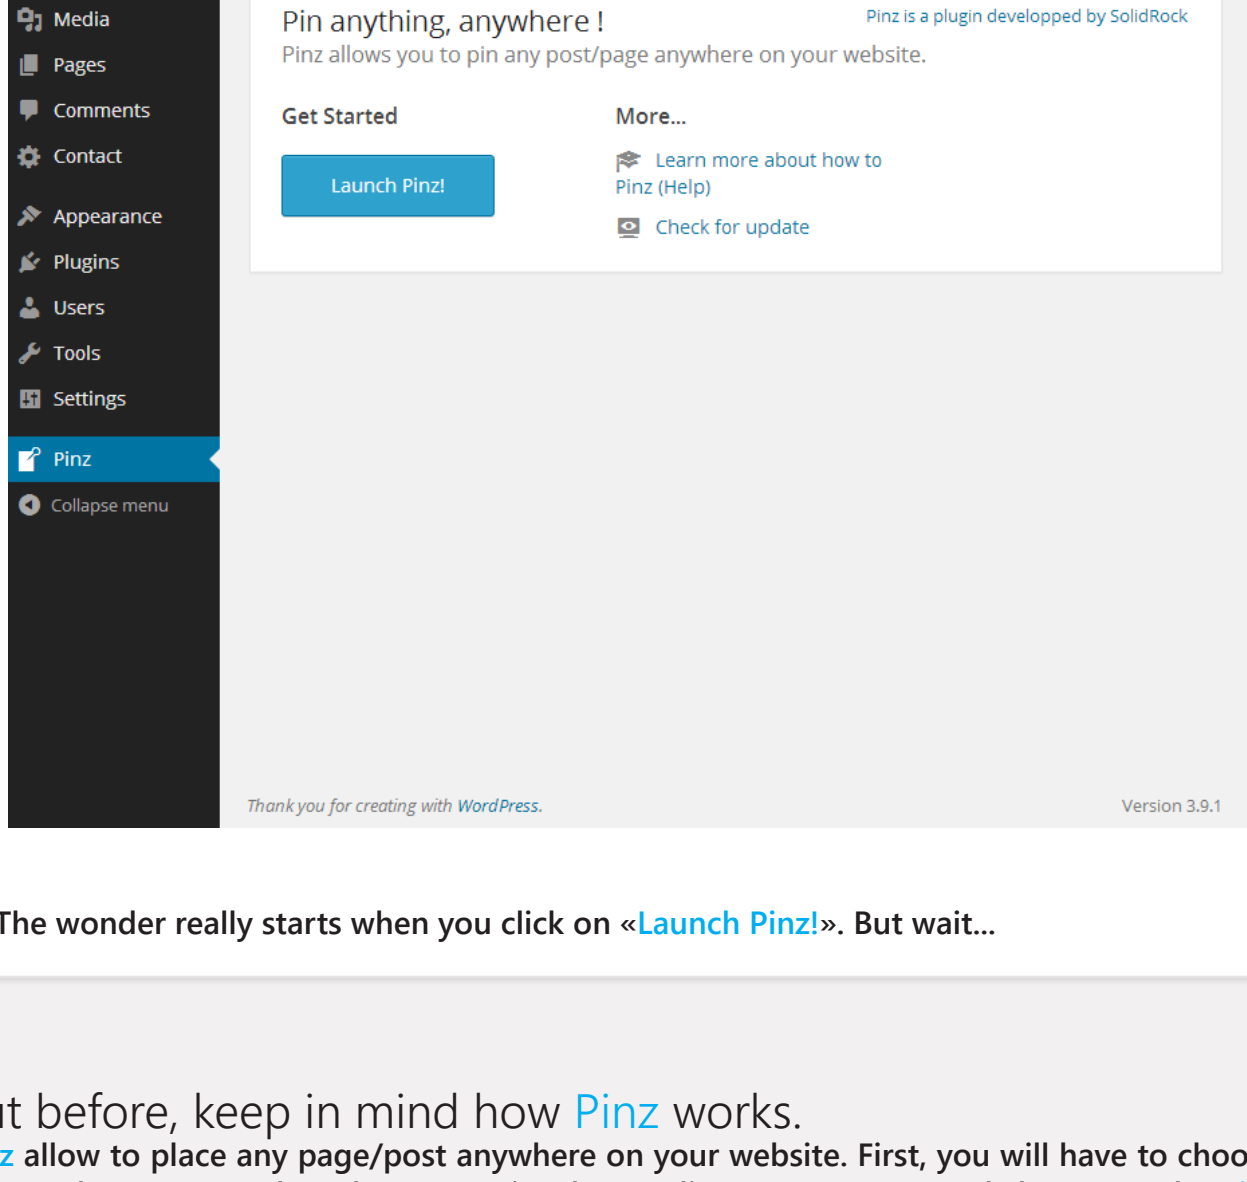

Click on «Upload». You now have to choose the path on computer where you downloaded the zip file. Once you find it, just click on «Install Now». After a few seconds, Wordpress will ask you if you wish to active the plugin : click on the link to activate.

**Pinz** is now installed on your Wordpress !

## The basics of Pinz

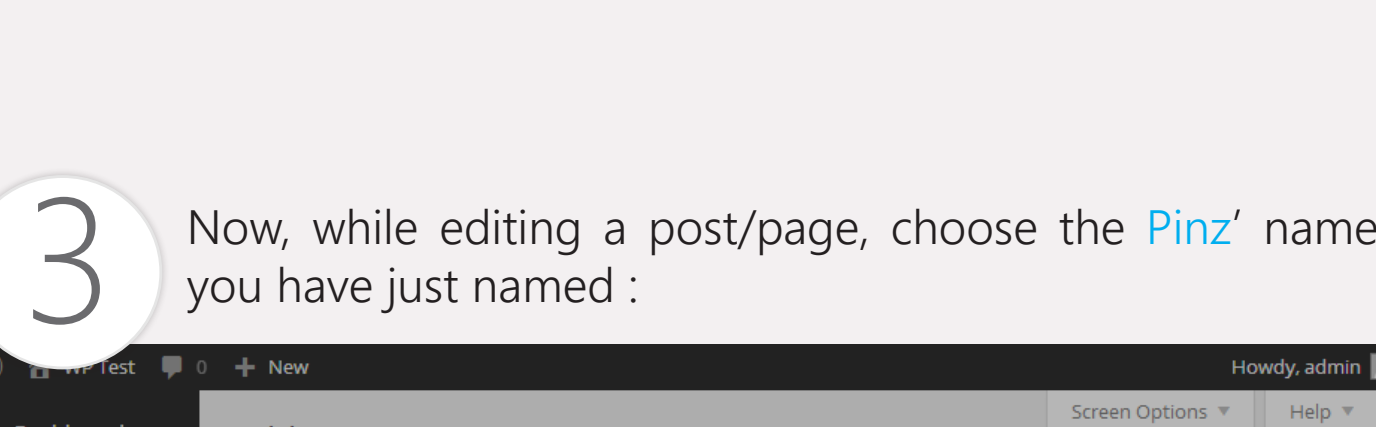

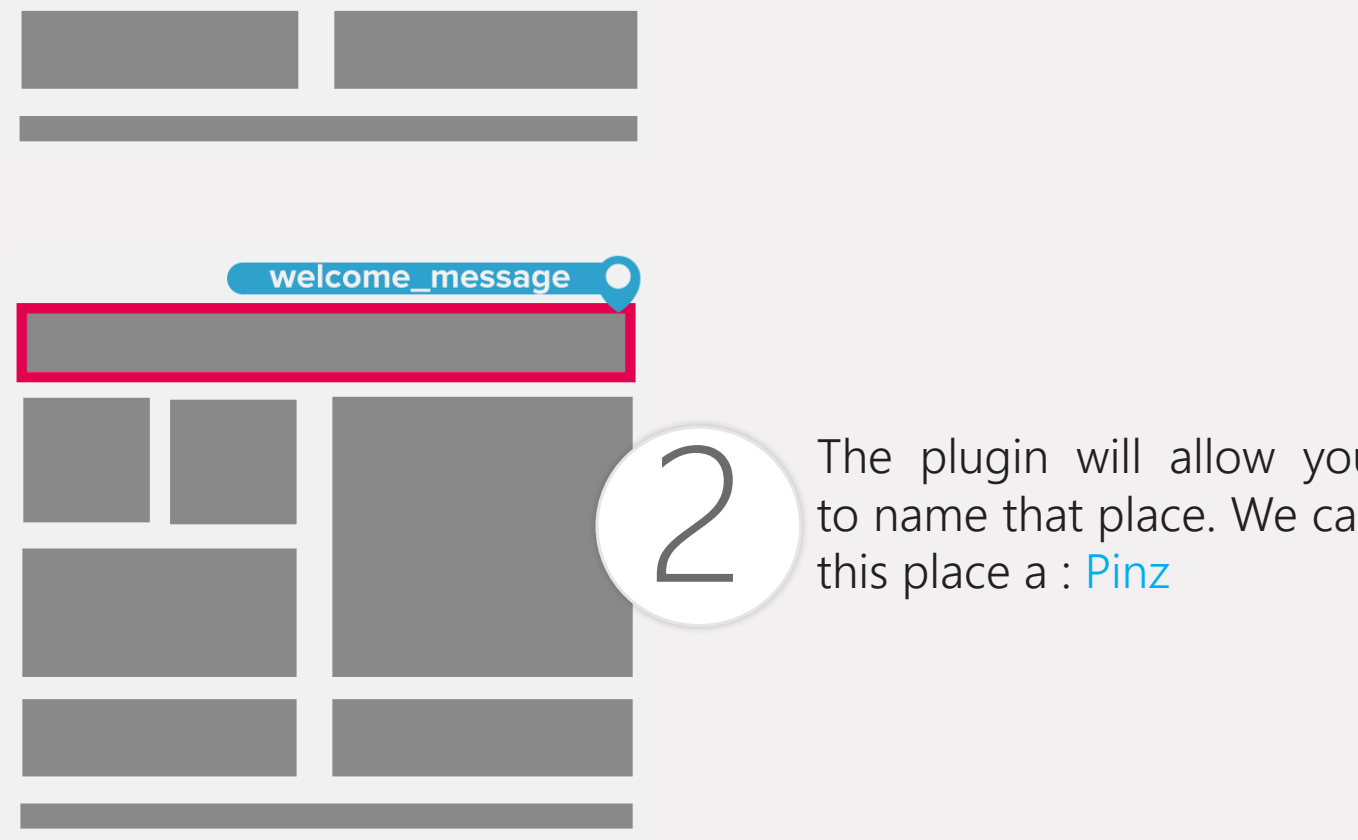

In your Wordpress admin area, locate «**Pinz**» on the left in the navigation bar. This is Pinz' simple introduction page :

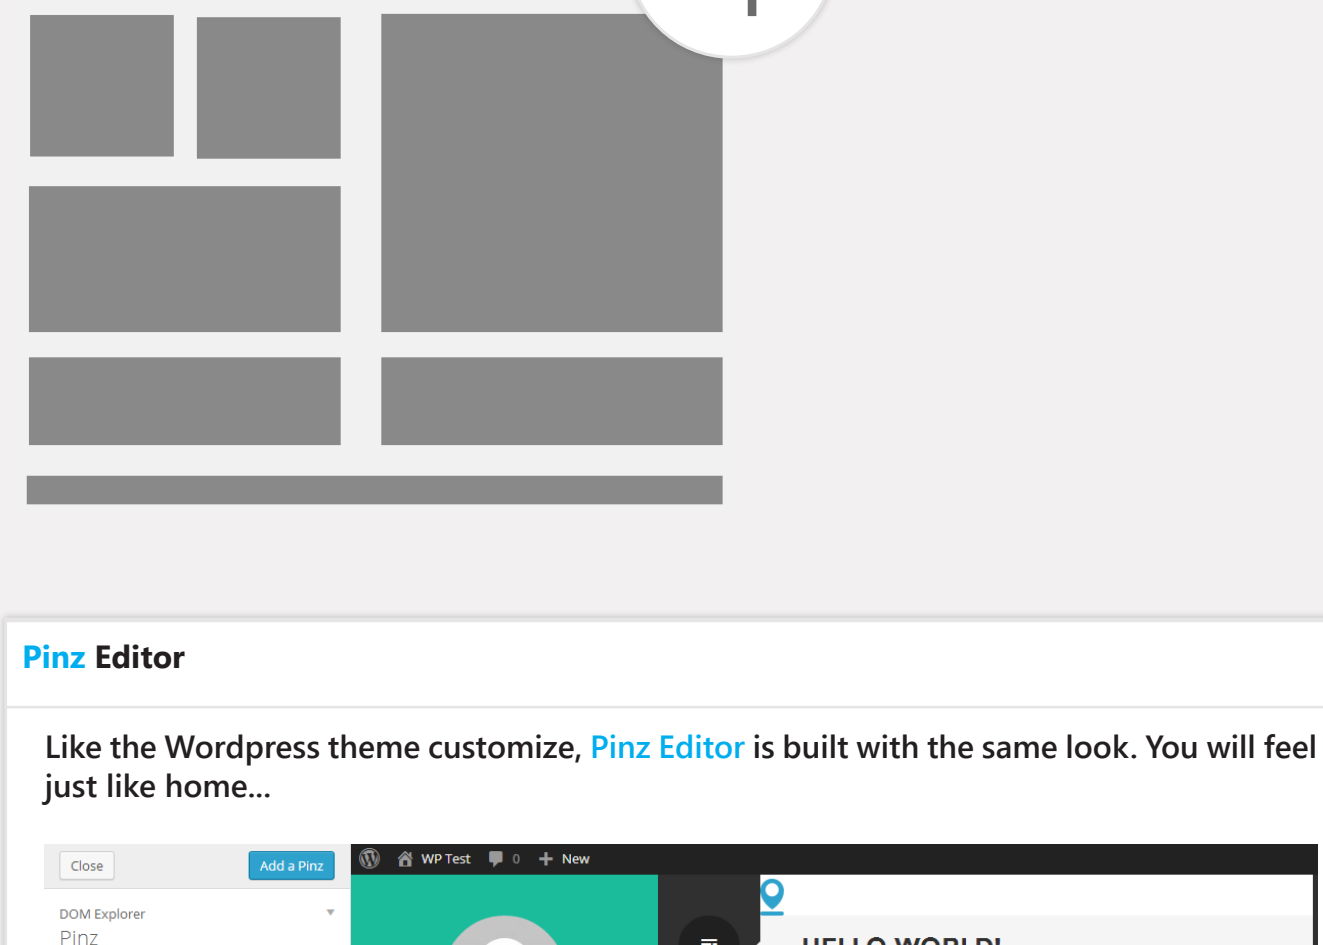

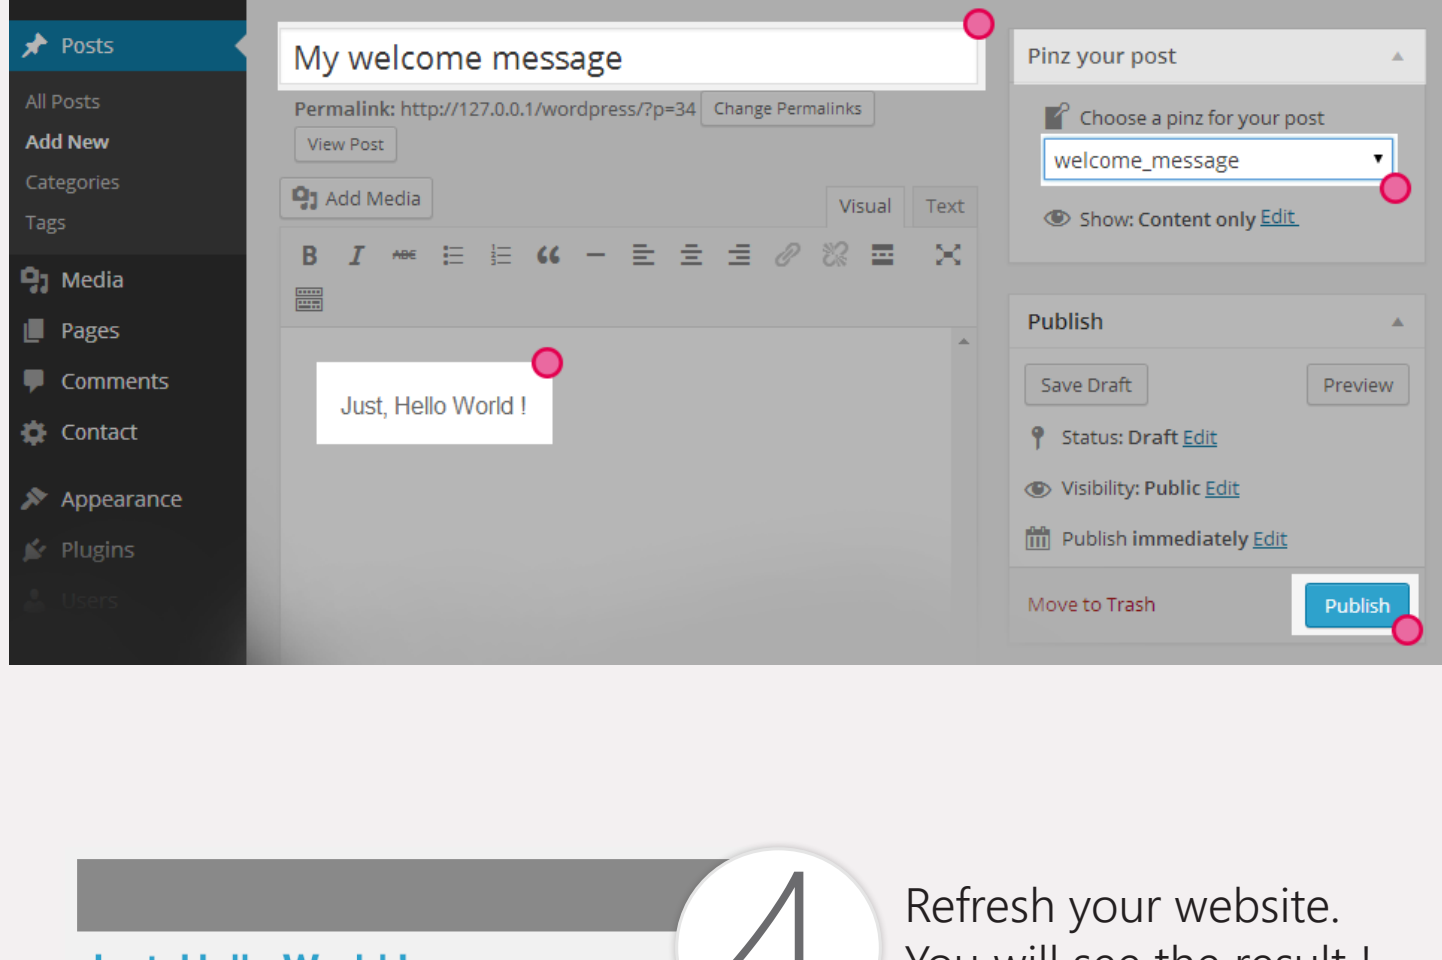

The wonder really starts when you click on «**Launch Pinz!**». But wait...

But before, keep in mind how **Pinz** works.

**Pinz** allow to place any page/post anywhere on your website. First, you will have to choose where. Then, a name that place. Once it's done, edit a post or page and choose on the **pinz** metabox the name you have just created. In simple words :

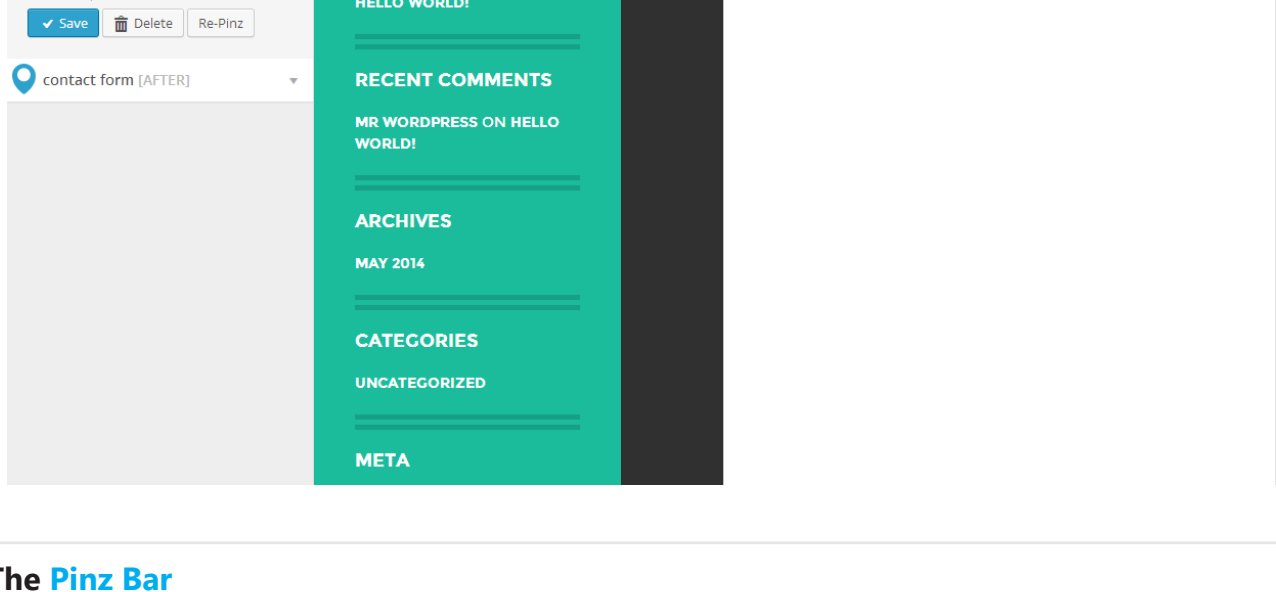

Now, while editing a post/page, choose the **Pinz'** name you have just named :

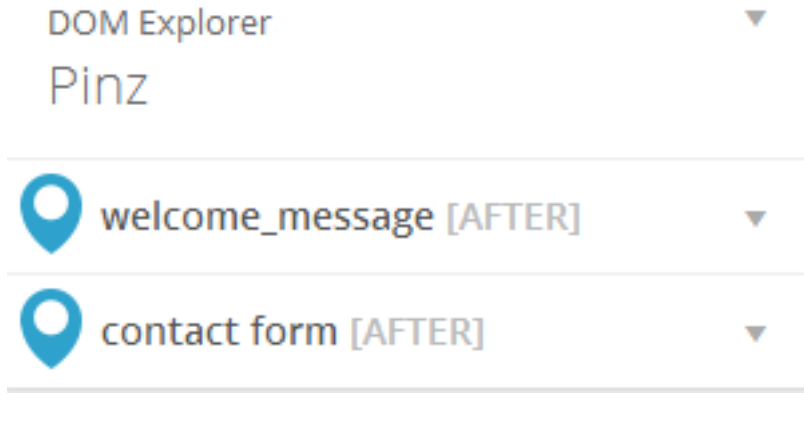

Refresh your website. You will see the result !

## Pinz Editor

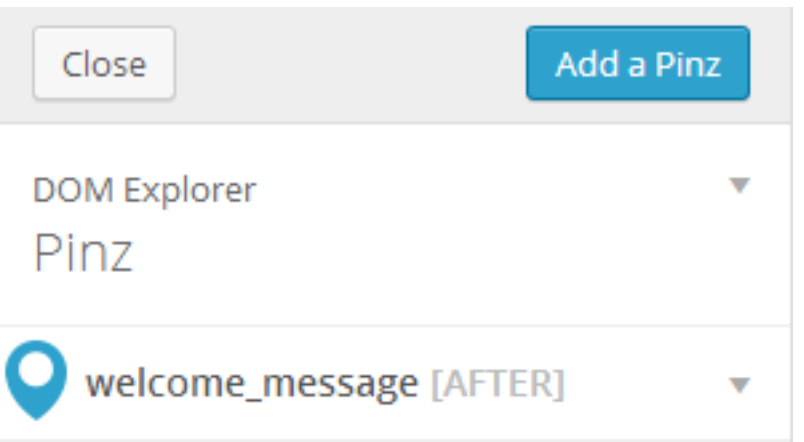

Like the Wordpress theme customize, **Pinz Editor** is built with the same look. You will feel just like home...

## The Pinz Bar

Collapsed menu

Menu details:

**Pinz Name :** name of your choice. Keep it simple.

**Place You Content (Before/After) :** Place the pinz' content before or after the chosen element.

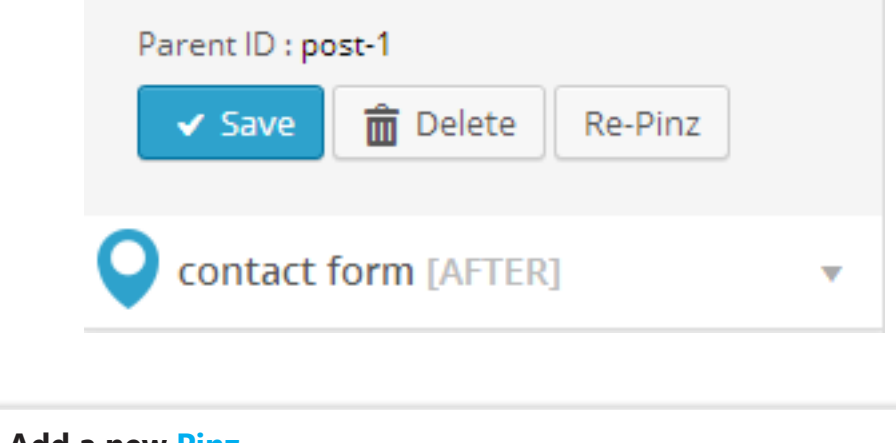

**DOM Explorer & Pinz Inspector :** This is just for information. If you have some knowledge in HTML, this will talk to you :)

**Save:** Save your pinz.

**Delete:** Delete your pinz.

**Re-Pinz:** Select an other place for your pinz.

**Note :** Parent ID : Pinz is here showing you the closest parent which has an ID, meaning that it is not neceserally the direct parent of the element.

## Add a new Pinz

**Add a Pinz** When you are ready, just click «Add a **Pinz**» to create a new **Pinz**.

Now, move your mouse over your website. You will find that the plugin will draws a rectangle around each element on your website.

**TIP :** Press **ESC** to cancel

### Please note

When you change a theme, you will have to edit all your **pinzs** and adapt them to the new theme.

We are working on a preset manager which will allow to save a group of pinz under one name and load them later.

Thank you for reading !

Don't hesitate to experience and see the result. **Pinz** gives you more control on your content.

We are constently adding new features. Let us hear your suggestions !
